Time Limit: <b>2 second(s)</b>		Memory Limit: <b>32 MB</b>	

Given the value of  $a+b$  and  $ab$  you will have to find the value of  $a^n+b^n$ .  $a$  and  $b$  not necessarily have to be real numbers.

### Input

Input starts with an integer  $T$  ( $\leq 10000$ ), denoting the number of test cases.

Each case contains three non-negative integers,  $p$ ,  $q$  and  $n$ . Here  $p$  denotes the value of  $a+b$  and  $q$  denotes the value of  $ab$ . Each number in the input file fits in a signed 32-bit integer. There will be no such input so that you have to find the value of  $0^0$ .

### Output

For each test case, print the case number and  $(a^n+b^n)$  modulo  $2^{64}$ .

Sample Input	Output for Sample Input
2	Case 1: 68
10 16 2	Case 2: 91
7 12 3
